

# DELAWARE

*Delaware includes high-achieving students in its growth model but does little else to encourage schools to pay attention to them.*

## THE PURPOSE OF THIS ANALYSIS

The Every Student Succeeds Act grants states more authority over their school accountability systems than its predecessor, No Child Left Behind (NCLB). Consequently, states now have an opportunity to design school rating systems that improve upon the NCLB model, especially when it comes to high achievers.

NCLB meant well (as did many state accountability systems that preceded it), but it had a pernicious flaw. Namely, it created strong incentives for schools to focus all their energy on helping low-performing students get over a modest “proficiency” bar, while ignoring the educational needs of their high achievers, who were likely to pass state reading and math tests regardless of what happened in the classroom. This may be why the United States has seen significant achievement growth for its lowest-performing students over the last twenty years but smaller gains for its top students.

Starting in 2011, former Secretary of Education Arne Duncan offered waivers to states that wanted the flexibility to redesign their accountability systems. In particular, states were allowed to incorporate the use of real student growth measures into their school determinations. This was important for a variety of reasons. First, growth measures more accurately evaluate schools' impact on student achievement than proficiency rates, which are strongly correlated with student demographics, family circumstance, and prior achievement. But just as significantly, well-designed growth measures can eliminate the temptation for schools to ignore their high achievers.

ESSA maintains NCLB's requirement that states assess students annually in grades 3–8 and once in high school, as well as the mandate that states adopt accountability systems that lead to ratings for schools. These systems must include four types of indicators: academic achievement; another academic indicator, which can include student growth for elementary and middle schools; growth towards English proficiency for English language learners; and at least one other valid, reliable indicator of school quality or student success. Each of the academic indicators (1–3) must carry “substantial” weight and, in the aggregate, must count “much more” than the fourth.

Here we examine whether Delaware's accountability system prioritizes high achievers. We specifically evaluate the state's system for rating school performance during the 2014-2015 school year. We do not examine the quality of Delaware's standards, tests, or sanctions for low performance.

This analysis also illustrates how states can seize the opportunity under ESSA to redesign their accountability systems and prioritize high achievers.

This last point is especially important because many state accountability systems are currently in flux. In part, that's because of recent changes allowed by ESEA waivers, as well as the coming changes driven by ESSA implementation. But it's also because states across the country recently moved to new, tougher assessments linked to their new, tougher standards.

States may think we're being premature in evaluating their systems during this time of massive change. Please understand that our primary objective is to identify the design features of an accountability system that works for all students—which we hope will become the prevailing model now that ESEA is reauthorized and states' testing regimes are becoming stable once again.

Our focus here is on rating systems for elementary and middle schools. A separate analysis will examine the same issues for high school accountability.

## HOW STATES CAN PRIORITIZE HIGH ACHIEVERS IN THEIR SCHOOL ACCOUNTABILITY SYSTEMS

In our view, states can and should take four steps to ensure that the needs of high achievers are prioritized under ESSA:

1. **For the first academic indicator required by ESSA (“academic achievement”), give schools incentives for getting more students to an “advanced” level.** Under ESSA, states will continue to track the percentage of students who attain proficiency on state tests. They should also give schools incentives for getting students to an advanced level (such as level four on Smarter Balanced or level five on PARCC). For example, they might create an achievement index that gives schools partial credit for getting students to “basic,” full credit for getting students to “proficient,” and additional credit for getting students to “advanced.” (It's not entirely clear from the Department of Education's proposed regulations whether this will be allowed, though we don't see anything in the law prohibiting it.)
2. **For the second academic indicator expected by ESSA (student growth), rate schools using a “true growth model,” i.e., one that looks at the progress of individual students at all achievement levels and not just those who are low-performing or below the “proficient” line.** Regrettably, some states still don't consider individual student growth, or else they use a “growth-to-proficiency system” that continues to encourage schools to ignore the needs of students above (or far above) the proficient level. Using true growth models—such as “value added” or the “growth percentile method”—for all students is much preferred.

3. **Include “gifted students” (or “high achieving students”) as a subgroup in the state’s accountability system and report results for them separately.** States can signal that high achievers matter by making them a visible, trackable “subgroup,” akin to special education students or English language learners, and publishing school ratings for their progress and/or achievement. (Obviously, it makes little sense to simply report that high achievers are high-achieving. But whether they are making strong growth is quite relevant. Alternatively, states might publish results for students labeled as “gifted,” though that opens up a can of worms about how that label is applied.)
  
4. **When determining summative school ratings, make growth—across the achievement spectrum—count the most.** Finally, the Department of Education’s proposed regulations require states to combine multiple factors into summative school ratings, probably through an index. Each of the three academic indicators (achievement, growth, and progress toward English proficiency) must carry “substantial” weight. But in our view, states should (and, under ESSA, are free to) make growth matter the most (50 percent or more of a school’s total score). Otherwise, schools will continue to face an incentive to ignore their high-performers. (States that don’t combine their indicators into a summative school rating receive a “Not Applicable” here.)

**DOES DELAWARE’S ACCOUNTABILITY SYSTEM PRIORITIZE HIGH ACHIEVERS?**

INDICATOR	RATINGS	NOTES
1. Does the state rate schools’ “academic achievement” using a model that gives additional credit for students achieving at an “advanced” level?		Delaware does not give additional credit for students achieving at an “advanced” level. <sup>1</sup>
2. Does the state rate schools’ growth using a model that looks at the progress of all individual students, not just those below the “proficient” line?		Delaware uses a gain score model. <sup>2</sup> A gain score model measures the absolute improvement in students’ achievement (in points) using a common scale.
3. Does the state’s accountability system include “gifted students,” “high-achieving students,” or the like as a subgroup and report their results separately?		Delaware does not include “gifted students,” “high-achieving students,” or the like as a subgroup or report their results separately. (See Exhibit A.)
4. When calculating summative school ratings, does “growth for all students” count for at least half of the rating?		Delaware comes close. “Growth for all students” counts for 40 percent of a school’s summative rating. (See Exhibit B.)

EXHIBIT A<sup>3</sup>

## Seaford Middle School

**Address**

500 East Stein Highway, Seaford, DE 19973

**Phone**

(302) 629-4587

**Website**

[www.seafordbluejays.org](http://www.seafordbluejays.org)

**District**

Seaford School District

**Principal**

Kim Simmons

**Grades Served**

5-8

### Demographics

**Total Enrollment** 860

American Indian/ Native American 0.6%

African American 37.9%

Asian 1.3%

Hawaiian/ Pacific Islander 0.2%

Hispanic 17.4%

White 39.5%

Multiracial 3.0%

Combined Student Groups (Student Gap Group) 77.1%

Low Income 52.2%

Students with Disabilities 20.6%

English Language Learners 5.7%

### School Narrative

At Seaford Middle School we strive to balance our academic focus with a caring school environment. Our "Spotlight On Success" program offers positive incentives for students as a way to support our focus on Positive Behavior Interventions and Support. Special "SOS" events are planned throughout the school year in order to recognize positive behavior choices. This program was the recipient of the 2010 Superstars In Education Award. A full slate of athletic and extracurricular activities are also offered to enhance our students' experiences while attending Seaford Middle School.

### School Overall Performance

#### Academic Achievement

30% of Overall Performance

Students that are proficient have a greater likelihood of entry and success in education and career training beyond high school.

#### On Track to Graduation

10% of Overall Performance

Students who are on-track are more likely to complete high school on time, as well as succeed in education and training beyond high school.

#### Academic Growth

40% of Overall Performance

Schools with strong growth demonstrate a greater ability to improve student learning over time.

#### College & Career Preparation

20% of Overall Performance

Students that maintain or grow to proficiency are more likely to be prepared for success in education and career training beyond high school.

**Legend: What do the stars mean?**

### School Environment

The 5Essentials Survey allows students and staff in grades 4-12 to share their perspectives on the essential conditions for learning.
